ABOUT MAYSURE

Wuhan Maysure Plastic Products Co., Ltd. located in Wuhan, China, founded in 2013, is a leading brand of plastic packaging containers. We supply packaging bottles for food and beverage, personal care, cosmetics, medicinal and household chemical, as well as caps and closures.

Our business cooperative partners ranges from small businesses beginners to big overseas companies. It has grown into a multi-million dollar company and a professional one stop service supplier and a firm practitioner. MAYSURE innovated the creation of "kit" packs of all our products, which enable clients to purchase smaller quantities from MAYSURE at wholesale prices. This helps small businesses reduce costs by eliminating unnecessary overhead and needless storage fees. At the same time, large companies ordering pallet quantities from MAYSURE enjoy deep discounts.

To accompany our line of products, we also do OEM, ODM develop from nothing. The related deep processing crafts including Screen Printing, Custom Labels, Shrink Bands, Laser Engraving, Manual Sealing Machines, and offer Packaging Design and Decorating Services for companies that require or desire special differentiated service.

We also have branch office in Shanghai which is more convenient for customer visiting, exhibitions and much more easier to get the world fashion trend.

"MAYSURE" means measure, we measure our products higher against the industrial standard. The other meaning of "MAYSURE" in Chinese means "the bright rising sun". We aimed at building a healthy, environmental and glorious future living style for mankind.

We wish all the people could join us to striving for a better life. Let's begin from ourselves.

Concerning for the environment while meeting customer needs.
满足客户需求的同时关心环境

VISION

愿景

Provide customers with cost-effective, diversified, more personalized and higher quality packaging solutions.

给客户id提供多样化, 更个性化, 更高质量的包装解决方案

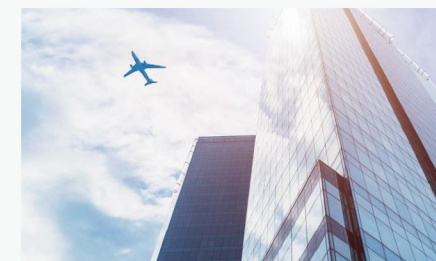

VALUE

价值观

We measure our products higher against the industrial standard, and persistent pursuit of customizing exclusive products and brands for each customer.

我们以更高的行业标准衡量我们的产品, 执着追求为每一位客户定制专属的产品和品牌。

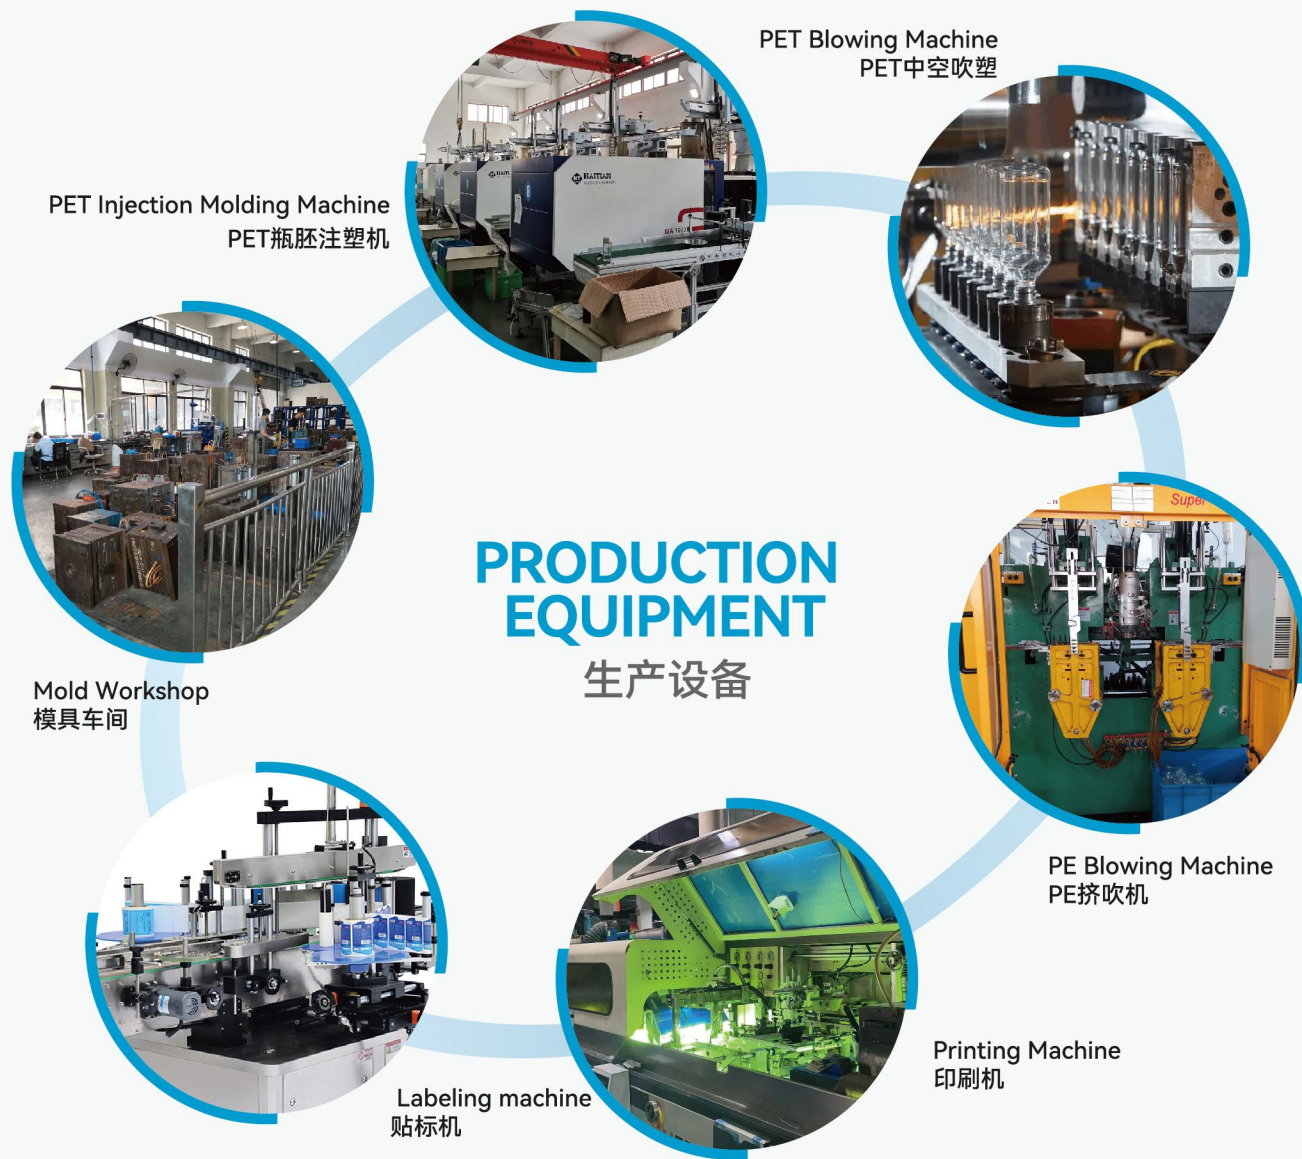

MISSION

使命

We aimed at building a healthy, environmental and glorious future living style for mankind.

我们旨在为人类建设健康、环保、美好的未来生活方式。

ADVANTAGES OF USING PLASTIC BOTTLES

Savings on Energy

Plastic bottles are lighter than glass bottles, which saves energy and money when shipping products. Plastic bottles require less energy to produce than glass bottles because plastics are soft and have relatively low melting temperatures.

Tough and Secure

Unlike glass containers, plastic bottles are robust and sturdy. When dropped, they do not shatter into sharp fragments. This makes products and packaging safe to handle. Plastics have important physical features such as toughness and chemical resistance because they are polymers (large molecules formed by connecting numerous small molecules). Bottles and containers made from plastic are impervious to leaks and bursts, preserving both the contents and the outer transportation containers.

MATERIALS FOR PRODUCING PLASTIC BOTTLES

PET:

A type of plastic
That may be used
To carry water and
Refreshments
On the go.

PP:

Plastic that is
Used to make
Pharmaceutical
Bottles (pills)

PE:

A stiff plastic bottle
Material that is also
Used to make squeeze
Bottles.

PC:

A material that is used
To create refillable and
Reusable containers.

TYPES OF MANUFACTURING TECHNIQUES FOR PLASTIC BOTTLES

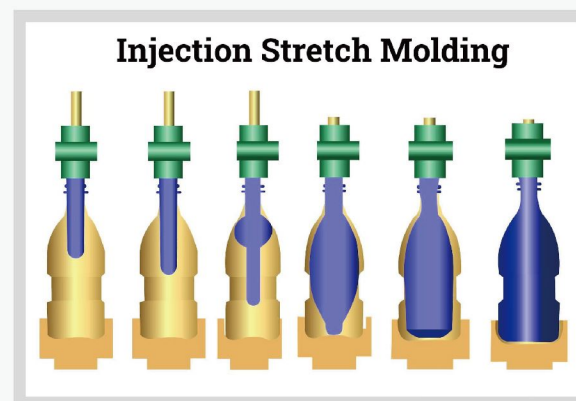

INJECTION BLOW MOLDING

For the manufacture of hollow plastic products, the injection blow molding process is employed. Injection blow molding is a three-stage process. Melted plastic is pumped into a mold cavity to create a preform parison during the first stage. The preform is formed like a test tube, but it has a molded screw finish on top. The preform is subsequently sent to the second stage of blow molding. To inflate a preform against a cold mold chamber, the air is pumped through a core pin. After that, the container is moved to the third station for ejection.

Stretch Blow Molding

The injection blow molding process serves as the foundation for stretch blow molding. This involves molding a preformed parison before transferring it to a blow molding chamber. To orient and align the molecules, the parison is stretched biaxially during blow molding. The container's gas barrier, stiffness, clarity, and impact strength are all improved because of this orientation. Containers can thus be lighter as a result. PET and polypropylene are examples of stretch blow molding resins.
